

**Proposed Claim Amendments**  
**Application No. 10/762,209**  
**Attorney Docket No. CHAES7.003AUS**  
**For the purpose of Telephonic Interview Only**

1. (Amended) A mobile phone, comprising: hinge device for coupling  
a first unit; rotatable about a first rotation axis and  
a second unit, at least one of the first and second units comprising a display, at  
least one of the first and second units comprising at least one information input device;  
rotatable about a second rotation axis parallel with the first rotation axis in an apparatus  
having the first and second units, comprising:  
a hinge device interconnecting the first and second units such that the first and  
second unit can rotate relative to the hinge device, the hinge device comprising:  
a housing;  
a first rotating member adapted to be coupled to the first unit and rotatable  
about the first rotation axis with respect to the housing;  
a second rotating member adapted to be coupled to the second unit and  
rotatable about the second rotation axis with respect to the housing;  
a first linearly moving member cooperating with the first rotating member  
and linearly movable with respect to the housing;  
a second linearly moving member cooperating with the second rotating  
member and linearly movable with respect to the housing;  
a first resilient member urging the first linearly moving member against  
the first rotating member; and  
a second resilient member urging the second linearly moving member  
against the second rotating member.
23. (New) A mobile phone, comprising:  
a first unit;  
a second unit, at least one of the first and second units comprising a display, at  
least one of the first and second units comprising at least one information input device;

a hinge device interconnecting the first and second units such that the first and second unit can rotate relative to the hinge device, the hinge device comprising:

a housing;

a first rotating member coupled to the first unit and rotatable about a first rotation axis with respect to the housing;

a second rotating member coupled to the second unit and rotatable about a second rotation axis with respect to the housing;

a first linearly moving member cooperating with the first rotating member and linearly movable with respect to the housing;

a second linearly moving member cooperating with the second rotating member and linearly movable with respect to the housing;

a first resilient member urging the first linearly moving member against the first rotating member; and

a second resilient member urging the second linearly moving member against the second rotating member.
